

# Image reproduction

Martin Raden

## Reproduce this chart!

It is often that you find a chart that you really like but have no idea how to do. An example might be the following one.

Which is shown and detailed on <https://ourworldindata.org>.

The idea of this project is to recreate this plot as close as possible using `ggplot` and the data available in the provided CSV file

Visualization priorities (from high to low are)

- line style with animal name labels
- percent labels at line ends
- time range label at line start
- x-axis marks
- arrow line style
- annotation of brown bear
- text coloring
- relative font sizes
- animal symbols (no idea where to get them ...)

In the end, this is a “boring” project, since it solely focuses on visualization details...
